

# HOSPITALITY MANAGEMENT

**UNILOCK**  
DESIGNED TO CONNECT.

# UNIQUE PROJECT CHALLENGES, **UNILOCK** HAS THE SOLUTION.

Hotel and resort properties face unique landscaping challenges in their desire to both project a brand image that attracts patrons, and to meet the functional needs of current guests. The following are just a few examples of how Unilock products can help provide solutions to these challenges.

## < DROP OFF AREA

**CHALLENGE:** This Fairmont Hotel in Chicago wanted to use their main entrance to create a memorable first impression that reinforces their premium brand positioning. The pavements needed to be able to handle a steady flow of vehicular and pedestrian traffic and needed to meet ADA (Americans with Disabilities Act) standards.

**SOLUTION:** Unilock offers a wide variety of paver colors, textures and sizes to suit the architecture of any property; everything from the look of historic brick street pavers to the contemporary look provided by Unilock Senzo® which we see here. In this case, linear patterns were used to guide traffic flow, using a show-stopping range of grey tones.

## < EVENT AREA

**CHALLENGE:** This Marriott property wanted to convert a secondary entrance into a new outdoor lounge area and event space. The pavement needed to withstand frequent furniture reconfigurations to maximize the life cycle of the project.

**SOLUTION:** By selecting Unilock EnduraColor™ and EnduraColor™ Plus Architectural Finishes products, property managers can be assured that the surface will outlast standard pavers. The rich colors of EnduraColor will never fade and EnduraColor™ Plus products offer added technologies to further improve long term durability and stain resistance.

In this project, Unilock wall products were also used to create pillars, garden areas and practical seat walls that also help define the space.

TOMATZOES TRENTON, ONTARIO.

## < RESTAURANT PATIO

**CHALLENGE:** Restaurant areas are most vulnerable to food and drink staining and therefore must be easy to clean.

**SOLUTION:** This restaurant in Ontario, Canada chose Unilock Senzo® with EasyClean™, a proprietary technology that makes the surface easier to clean and maintain before stains set in.

SADDLE & CYCLE CLUB CHICAGO, ILLINOIS.

## < PERMEABLE PARKING LOT

**CHALLENGE:** Many infill projects and new buildings are required to comply with local regulations that dictate how rainwater runoff must be managed. This recreational club needed a vehicle parking area that was permeable, but which complimented the aesthetics of their unique architecture.

**SOLUTION:** From heritage to contemporary, Unilock permeable products offer an extensive range of colors and styles that meet rainwater management specifications. In addition, many of these products are also ADA (Americans with Disabilities Act) compliant.

CONTINENTAL PLAZA HACKENSACK, NEW JERSEY.

## < LOGO CUT-INS

**CHALLENGE:** This complex in New Jersey wanted to take advantage of an expansive paved area to reinforce their brand identity.

**SOLUTION:** To create a truly distinctive branded landscape, Unilock pavers were used in contrasting colors to create a cut in of the brand logo. There are infinite possibilities for logo designs using the wide range of Unilock paver colors, sizes and finishes.
